

MANUAL

► Features

Machine is advanced high-tech product which designed for high-end mobile and portable devices. It makes your mobile phone act as the "brain" of your car by combining smart phone with car.

It supports phone which has WIFI Miracast or Airplay Mirroring protocol or other DLNA-equipped devices to wireless mirror phone screen to car video player. For this wireless connection, your phone's screen can be mirrored to the car video player in real-time and provide navigation , play-audio, entertainment and so on.

In addition, you can share anything in your phone such as photos, music, video, etc. with family or friends by forwarding them from your smart phone to car video player.

► Product components

Connection description

Note:plug the phone data cable with the USB port then can mirror the screen directly without connect the Wi-Fi first.

► How to link

Connect by AV cable

1.AV port is in the armrest box.

- Plug the AV connector in the same color port
- Plug USB to get power supply if there has USB port in your car. If not, you can connect to cigarette lighter to get power.

Clinking corresponding signal input AV/TV / External input / Auxiliary input on the car video displayer (shows as Pic1), then it will enter a interface as Pic2. It means product can work normally.

2.AV port is behind the car video player

Take out the car video player to check the interface diagram . Then find out Video IN, Left Line IN and Right Line IN. Finally find out the ACC and GND , it can be screen power supply or car power supply.

- Plug the AV connector in the same color port
- Connect the product's ACC cable to the car ACC and GND cable to the car GND.
- The installation of antenna will effect the fluency for playing. It can be pasted on the front of car or AB plastic board.

Clinking corresponding signal input AV/TV / External input / Auxiliary input on the car video displayer , then it will enter a interface as Pic2. Means it can work normally.

Connect by HDMI cable

- Connect the HDMI cable to the car HDMI port
- Plug USB to get power supply if there has USB port in your car. If not, you can connect cigarette lighter to get power.

* This picture represents a screen display has been properly connected
